

Urbaaco

Access Control

It's simple, it's practical it's Urbaco.

Which bollard is best suited for my project?
Must I choose an automatic bollard?
Or, will a semi-automatic one do?
And, do bollards work in stand-alone mode?
Can I run a Luxor automatic bollard on any technical centre?
What do I need to complete my installation?
What's the range of standard models?
May I choose any RAL colour I wish?

Welcome to URBACO!

This catalogue will make it easy and practical for you to choose URBACO products:
A simple tool that explains why you need to install loops and detectors;
A practical tool to help you understand the language of the working logic, the product combinations and the development potential of your project;
It's intuitive and well illustrated to bring you closer to Urbaco.
Just try finding what's right for you among its pages.

It's easy. Just browse and see!

Just add space

Urbaco

Known the world over for having invented the retractable bollard, Urbaco stands for top-notch technology to make the space around you more liveable and comfortable. With Urbaco you can organise and modify traffic flows and even cut back on environmental pollution.

Our product range brings you high-quality performance and unmatched aesthetic accuracy, so the elements you choose always fit perfectly into any context, whether historical or modern.

Urbaco is continually developing, and boasts a capillary network of partners and collaborators to quickly, efficiently and competitively meet our clients' requests.

From estimate to installation, from maintenance to after-sales assistance. It's about providing intelligent service and solutions.

Certified innovation

Our clients have been putting their trust in us for 25 years – in return we guarantee them the highest possible quality.

That's why our integrated quality and environmental management system, certifies that our technologies and processes all comply with the standards set by current European legislation.

Urbaco's retractable bollards all comply with French law NFP 98-310.

As of April 1, 2009 we obtained the official document from the Italian Ministry of Transport and Infrastructure (protocol n. 32658), which approves a series of automatic bollards that can now be installed in public areas.

Over the years numerous patents have been filed around the world, which is a guarantee of the uniqueness of the innovative products that Urbaco brings you.

Checks, tests, trials

The reliability of Urbaco products is constantly and intensely scrutinized through a program involving checks, tests and trials. Our retractable bollards undergo:

Crash testing: a destructive test of the solidity of our products to withstand impacts and protect the access even against forced attempts and is performed in compliance with antiterrorism regulations of the Department of State DOS Crash Test Certification.

Duration trial: (Baillif approved)
the trial is run uninterruptedly for 24 hours on two bollards. 4.5 million up and down cycles without any breakdowns or need for replacements.

Impact resistance trial: (retractable bollards – Road-Testing Lab – City of Paris). Urbaco bollards yielded a resistance range of between 2,500 and 15,000 joules.

Impact resistance test: (on automatic retractable bollards. 2005). Results: the 250 mm diameter, 500 mm height bollard withstands the 50 km/h-impact of a 1.2 tonne automobile; the 250 mm diameter, 750 mm height bollard withstands the 55 km/h impact of 2.5 tonne vehicle.

Vehicle passing resistance test:
the Cylinder and Vendôme retractable, automatic and semi-automatic bollards with 200 and 250 mm diameters and 500 and 750 mm heights, have undergone vehicle passing tests in compliance with what set forth by standard ISO EN 124 and are E600 (Group 5) approved. This means they are fit to be installed in areas that take heavy loads, for example at ports and airports.

Pneumatic Automatic Bollards

Simplicity is standard

Just press a button on the transmitter, the bollards come up and the square empties of traffic leaving space for pedestrians. The same square which, during the day, was a flurry of activity becomes peaceful and quiet enough for a pleasant stroll.

Keying in a code on the keypad and the bollards in front of a car dealership surface. The businessman has chosen to sleep worry-free by delegating the protection of his premises to retractable bollards.

The space we live deserves to be managed so as to be as pleasant as possible. That's why Urbaco is the only possible answer because we have had a talent for managing space for over a quarter century.

Access control

Urbaco bollards let you control access to areas that require restricted vehicle access for safety or security reasons. They are typically installed at business centres, historical centres, luxury goods shops or sensitive facilities. The bollards help cut down on carbon monoxide emissions in historical town centres with restricted vehicle access.

These kinds of bollards are managed by a micro technical centre - MTC - or by a City control unit handled by an end user. The user sends a command via a transmitter, proximity card, push-button or keyboard switch. Access to an area will either be allowed or restricted depending on whether the bollards have ascended or descended.

The MTC or City systems can also manage the power supply that makes the bollards move. These basic access control functions can be supplemented with metal mass detecting loops. The loops can be of two types: security and security/presence.

Security loops: detects vehicles present and keeps the bollard down as long as vehicle is above the loop.

The security/presence loop: detect vehicles and allow the user's command to be activated through a command device. The bollard descends to let the detected vehicle through. The loop is placed below the road surface and can simultaneously perform both functions, that is, security/presence and security.

The number of loops installed depends on the type of operation (functioning logics) desired.

Functioning logics

Controlled entrance or exit by the PLC LOGO! or the AT224

Components:

- Two loops
- One or more bollards that work simultaneously
- One access
- One-way traffic

Controlled entrance and exit by the PLC LOGO! or the AT224

Components:

- Two loops
- One or more bollards that work simultaneously
- One access
- Two-way traffic

Controlled entrance and exit by the U200 control board

Components:

- Two loops
- One or more bollards that work simultaneously
- One access
- Two-way traffic

The vehicle stops over the outside, security/presence loop.

The parker sends the bollards a command to descend.

The vehicle drives into the bollards space and drives beyond the inside security loop.

Only then does the bollard resurface automatically.

To enter and exit

The vehicle stops over either the outside or inside loop (security/presence or security).

The parker sends the bollards a command to descend.

The vehicle drives into the bollards space and drives beyond the inside or outside loop (security/presence or security).

Only then does the bollard resurface automatically.

Functioning logics

Automatic exit with the PLC LOGO! or the AT224

Components:

- Three loops
- One or more bollards that work simultaneously
- One access
- One-way traffic

Automatic exit with the U200 control board

Components:

- Three loops
- One or more bollards that work simultaneously
- One access
- One-way traffic.

Entrance IS NOT POSSIBLE - To exit

A vehicle stops on the inside both presence and security loop.

The bollard descends automatically when the vehicle is straddling both loops.

The vehicle drives away from the bollard's space and drives past the outside security loop.

Only then does the bollard resurface automatically.

Entrance IS NOT POSSIBLE - To exit

A vehicle drives and stops only over the inside presence loop.

The bollard descends automatically when the vehicle is detected by that loop.

The vehicle drives away from the bollard's space and drives past the outside security loop.

Only then does the bollard resurface automatically.

Functioning logics

Controlled entrance and automatic exit with the PLC LOGO! or the AT224

Components:

- Three loops
 - One or more bollards that work simultaneously
 - One access
 - Two-way traffic
-

Controlled entrance and automatic exit with the U200 control board

Components:

- Three loops
 - One or more bollards that work simultaneously
 - One access
 - Two-way traffic
-

To enter
The vehicle drives and stops over the outside, security/presence loop.

The parker sends a down command to the bollard.

The vehicle drives away from the bollard's space and past the inside security loop.

Only then does the bollard resurface automatically.

To exit
A vehicle stops on both loops, the inside security/presence loop.

The bollards descend automatically when the vehicle is straddling both loops.

The vehicle drives away from the bollard's space and drives past the outside security loop.

Only then does the bollard resurface automatically.

To enter
The vehicle drives and stops over the outside security/presence loop.

The parker sends a down command to the bollard.

The vehicle enters the bollard's area and drives past inside or outside loop (vehicle on and security).

Only then does the bollard resurface automatically.

To exit
The vehicle only stops over the inside presence loop.

The bollard descends automatically when the vehicle is detected over that loop.

The vehicle exits the bollard's area and drives past the outside security loop.

Only then does the bollard resurface automatically.

Luxor

Style and comfort

Reliability, protection and great price/quality ratio. But also beauty and elegance.

Luxor is the ideal answer to the applicative needs of large private and public administration settings, where control and comfort requirements meet aesthetics and integrate pleasantly. Large business centres, supermarket chains, car dealerships, important historical town centres have chosen Luxor's innovative design and technology. It emits an acoustic signal when in motion, which prevents pedestrians and bicycles from running into it. Also, in those areas that truly require vehicle traffic to be restricted, Luxor becomes instrumental in cutting down carbon monoxide emissions and preserving the environment.

Luxor features

The design of the bollard head

Designed to perfectly fit with the road surface when the bollard is down. It is made of cast iron to ensure that it withstands time.

The luminous crown

Is made up of 12 highly luminous diodes. It clearly shows where the bollard is when surfaced, especially at night.

The sound warning

To ensure safety for the public in the area where the bollard is installed.

The paint job

The additional RAL varnishing processing ensures that the colour holds fast.

The cover

Made of cast iron, it is sturdy and resistant.

The disposable folding box

Easy and handy to carry and install it is made of 10/10 galvanised sheet steel.

Luxor: helping safeguard the environment

Restricting vehicle traffic flows cuts down on exhaust fumes. That's another reason to get Luxor.

RAL 7016

RAL 3002

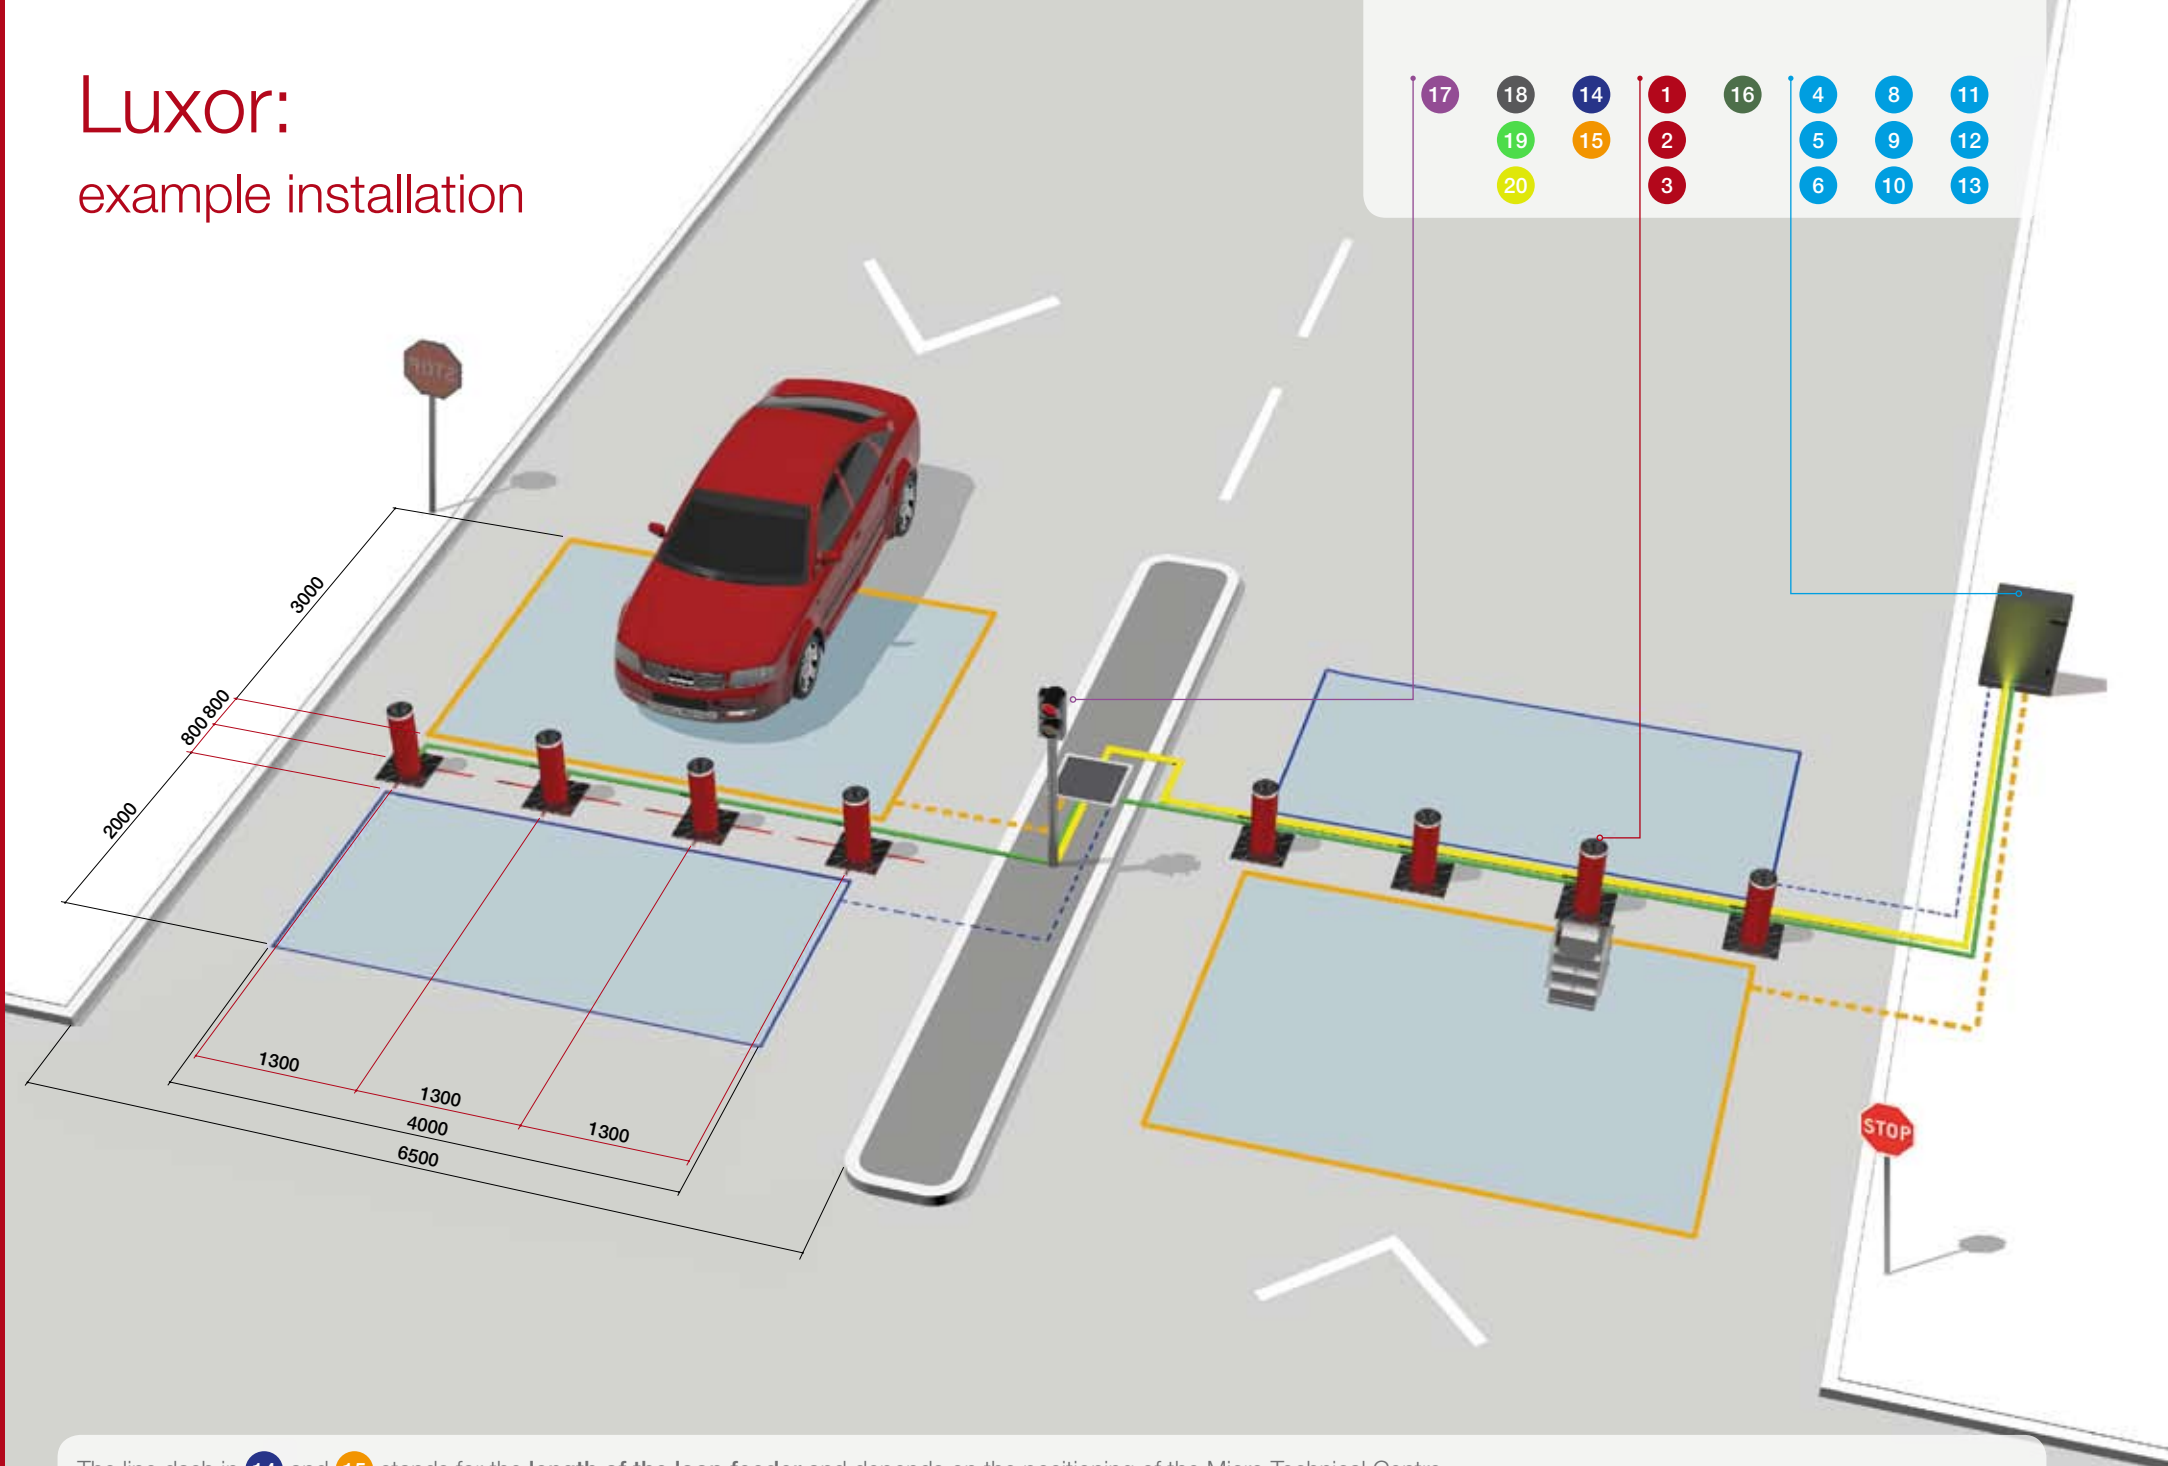

What is Luxor

Luxor is an advanced vehicle flow restricting system at the service of urban planning. Organising urban traffic, access and transit control, restriction of areas and environmental protection.

Lots of technology packed into a bollard suitable for many contexts.

Luxor: example installation

The line dash in **14** and **15** stands for the **length of the loop feeder** and depends on the positioning of the Micro Technical Centre. When choosing the **loop + feeder** combination you need to take into account said lengths as well as length P of the loop perimeter.

Pneumatic Automatic Bollards

Example installation

The drawing represents an installation of Luxor RAL 7016 automatic, pneumatic retractable bollards Ø 200 mm H 600 mm. The negative security device employed ensures that the bollard stays in the upright position even in case of blackouts.

The manual release system allows the bollard to descend manually whenever necessary.

A single Luxor CC6U200PRR Micro Technical Centre (with a supplementary COU2002A access add-on card) can manage two access points, one entrance and one exit.

Two types of loops are used: the (COBCL1425) security loop and the (COBCL1225) security/presence loop.

made up of:
one air hose L = 25 m, electric cable L = 25 m,
two T-fittings and four L-fittings.

Command elements

CC6U200PRR
Luxor Micro Technical Centre with U200 board
for managing one access without metal mass
detection complete with snap-in 433.92 MHz
radiofrequency card. With air supply.

CC6U200PRS
Soundproofed Luxor Micro Technical Centre with
U200 board for managing one access without
metal mass detection complete with snap-in
433.92 MHz radiofrequency card. With air supply.

* **COU2002A-LUX**
Extension card for managing one supplementary
access point for Luxor Micro Technical Centre.
Without command devices.

* **COREH02-LUX**
Base for Micro Technical Centre.

C3S1U200P
City 3 standard control unit with U200 board for
managing one access point without metal mass
detection.

KITCITY3
Cemented foundation base for the City3.

C6S1U200P
City6 standard control unit with U200 board for
managing one access point without metal mass
detection.

KITCITY6
Cemented foundation base for the City6.

COU2002A
Extension card for managing one supplementary
access point for Luxor Micro Technical Centre.
Without command devices.

Metal mass detectors

* **RDET1CM**
Single-channel metal mass detector with
memory function.

* **RDET2CM**
Two-channel metal mass detector with
memory function.

* **RSUPDET**
Support for mounting the detector.

* COKCHGT-LUX

Heater complete with thermostat. Power: 80W for the Luxor Micro Technical Centre cabinet.

COKCHCT

Heater complete with thermostat. Power: 80W for the City3 and City6 control unit.

* COVF-LUX

Ventilation kit for intensive use. For the Luxor Micro Technical Centre cabinet.

* COPURA-LUX

Automatic condensation exhaust for the Luxor Micro Technical Centre.

COINTSA

Analog interphone for secondary stations with max reach of 300 m for the City3 and City6 controllers.

* RINTC3A

Analog interphone for main station with 1 to 3 directions for the City3 and City6 controllers.

COCAMPH

Colour PINHOLE video camera for the City3 and City6.

* RMONTC14A

Fourteen-inch monitor for the COCAMPH video camera.

* RPUP10

Remote console with one impulse button.

Note:

The code for this product is always composed of the same five letters (COBCL) and four numbers. The first two numbers stand for the loop perimeter. Urbaco provides eight different loop perimeters: 04 m, 06 m, 08 m, 10 m, 12 m, 14 m, 16 m, and 18 m. The last two numbers stand for the loop feeder length which can span from 25 m to 50 m. For instance, if the loop perimeter is 14 m and the loop must be at least 25 m the code you must order is: COBCL1425.

The range

Radio transmitters

001TOP-432NA
Multi-user 433.92 MHz two-channel transmitter with 4,096 combinations and auto-learning.

001TOP-434NA
Multi-user 433.92 MHz four-channel transmitter with 4,096 combinations and auto-learning.

001TAM-432SA
Multi-user 433.92 MHz two-channel transmitter with 16,777,216 combinations and auto-learning.

001AT01
Rolling code 433.92 MHz single-channel transmitter with 4,294,967,896 combinations.

001AT02
Rolling code 433.92 MHz two-channel transmitter with 4,294,967,896 combinations.

001AT04
Rolling code 433.92 MHz four-channel transmitter with 4,294,967,896 combinations.

Radio remote control

COAF43S
Snap-in 433.92 MHz radiofrequency card for the City3 and City6 controllers.

COAF43SR
Snap-in 433.92 MHz radiofrequency card for up to 25 001TAM-432SA transmitter for the City3 and City6 controllers.

CORBE4RC
IP54 external 433.92 MHz four-channel receiver, 12 - 24 V AC-DC for up to 500 transmitters, complete with one AT04 master transmitter.

* **001TOP-A433N**
Antenna.

* **001TOP-RG58**
Antenna cable.

Selectors and transponders

COS6000
Flush-mounted keypad selector for the City3 and City6 controllers. 1,679,616 combinations.

* **001S6000**
Flush-mounted keypad selector to fit onto the 001CSS post. 1,679,616 combinations.

* **001S0001**
Single-channel command board for the S6000 selector (1 code memory).

* **001SET-J**
External key selector with aluminium alloy case, with lock protection door and lock cylinder.

COTSP01
Stand-alone transponder sensor for cards, keychains and TAG for up to 250 users for the City3 and City6 controllers.

* **001TSP01**
Stand-alone transponder sensor for cards, keychains and TAG for up to 250 users.

COLEC6000
Control device for transponder sensors, magnetic loops and magnetic strip cards, complete with software for up to 6,000 users for the City3 and City6 controllers.

RBDGLG
Blank proximity card (read only) with printed number.

001CSS
Natural anodized aluminium post H = 1 m for the SET-J and TSP01.

Note:

* Item supplied as a non-fitted accessory

Built on experience

The Cylinder retractable bollard comprises 25 years of Urbaco experience. At the top of the range, it consists of just three elements protected by the Monobloc patent. These are the case, the cover and the bollard head. Cylinder is made of nodular cast iron and is designed for controlling and managing flows on public and private streets.

With or without luminous crown, Cylinder bestows a touch of class wherever it is installed, so that aesthetics are not compromised despite its primary role of managing and restricting spaces. The range of RAL and customisable colours lets Urbaco meet any client request.

Ministero delle Infrastrutture e dei Trasporti

Omologazione per installazione sul suolo pubblico

protocollo n. 32658 del 1 aprile 2009

Cylinder features

The paint job

A zinc coating ensures the hold of the thermosetting polyester powder, matt paint job. The standard colour is RAL 7016, but clients can choose to customise this even from the non-RAL range.

The signalling system

A class II white reflecting band or a luminous crown to easily signal the fully surfaced bollard.

The bollard

Sturdy and durable, made of nodular cast iron, it is cast in a single block. The structure of the integrated rail ensures wear-free sliding over time. Minimal periodic maintenance and minor adjustments are all it takes for it to slide up and down constantly and safely.

The cover

Provides protection to the bollard thanks to the jacketing which allows energy to be distributed in contrary components, and transmitting it to the buried lost casing.

The slide ring

Made of plastic, it absorbs any friction with the bollard, while damping noise.

The box

With four guide rails and built-in Monobloc bar. This system holds the hydraulic jack in place and parallel to the guides.

The disposable folding box

Easy and simple to carry and install, it is made of 10/10 thick, galvanised steel sheeting.

RAL 7016

RAL 6009

RAL 3020

RAL 9005

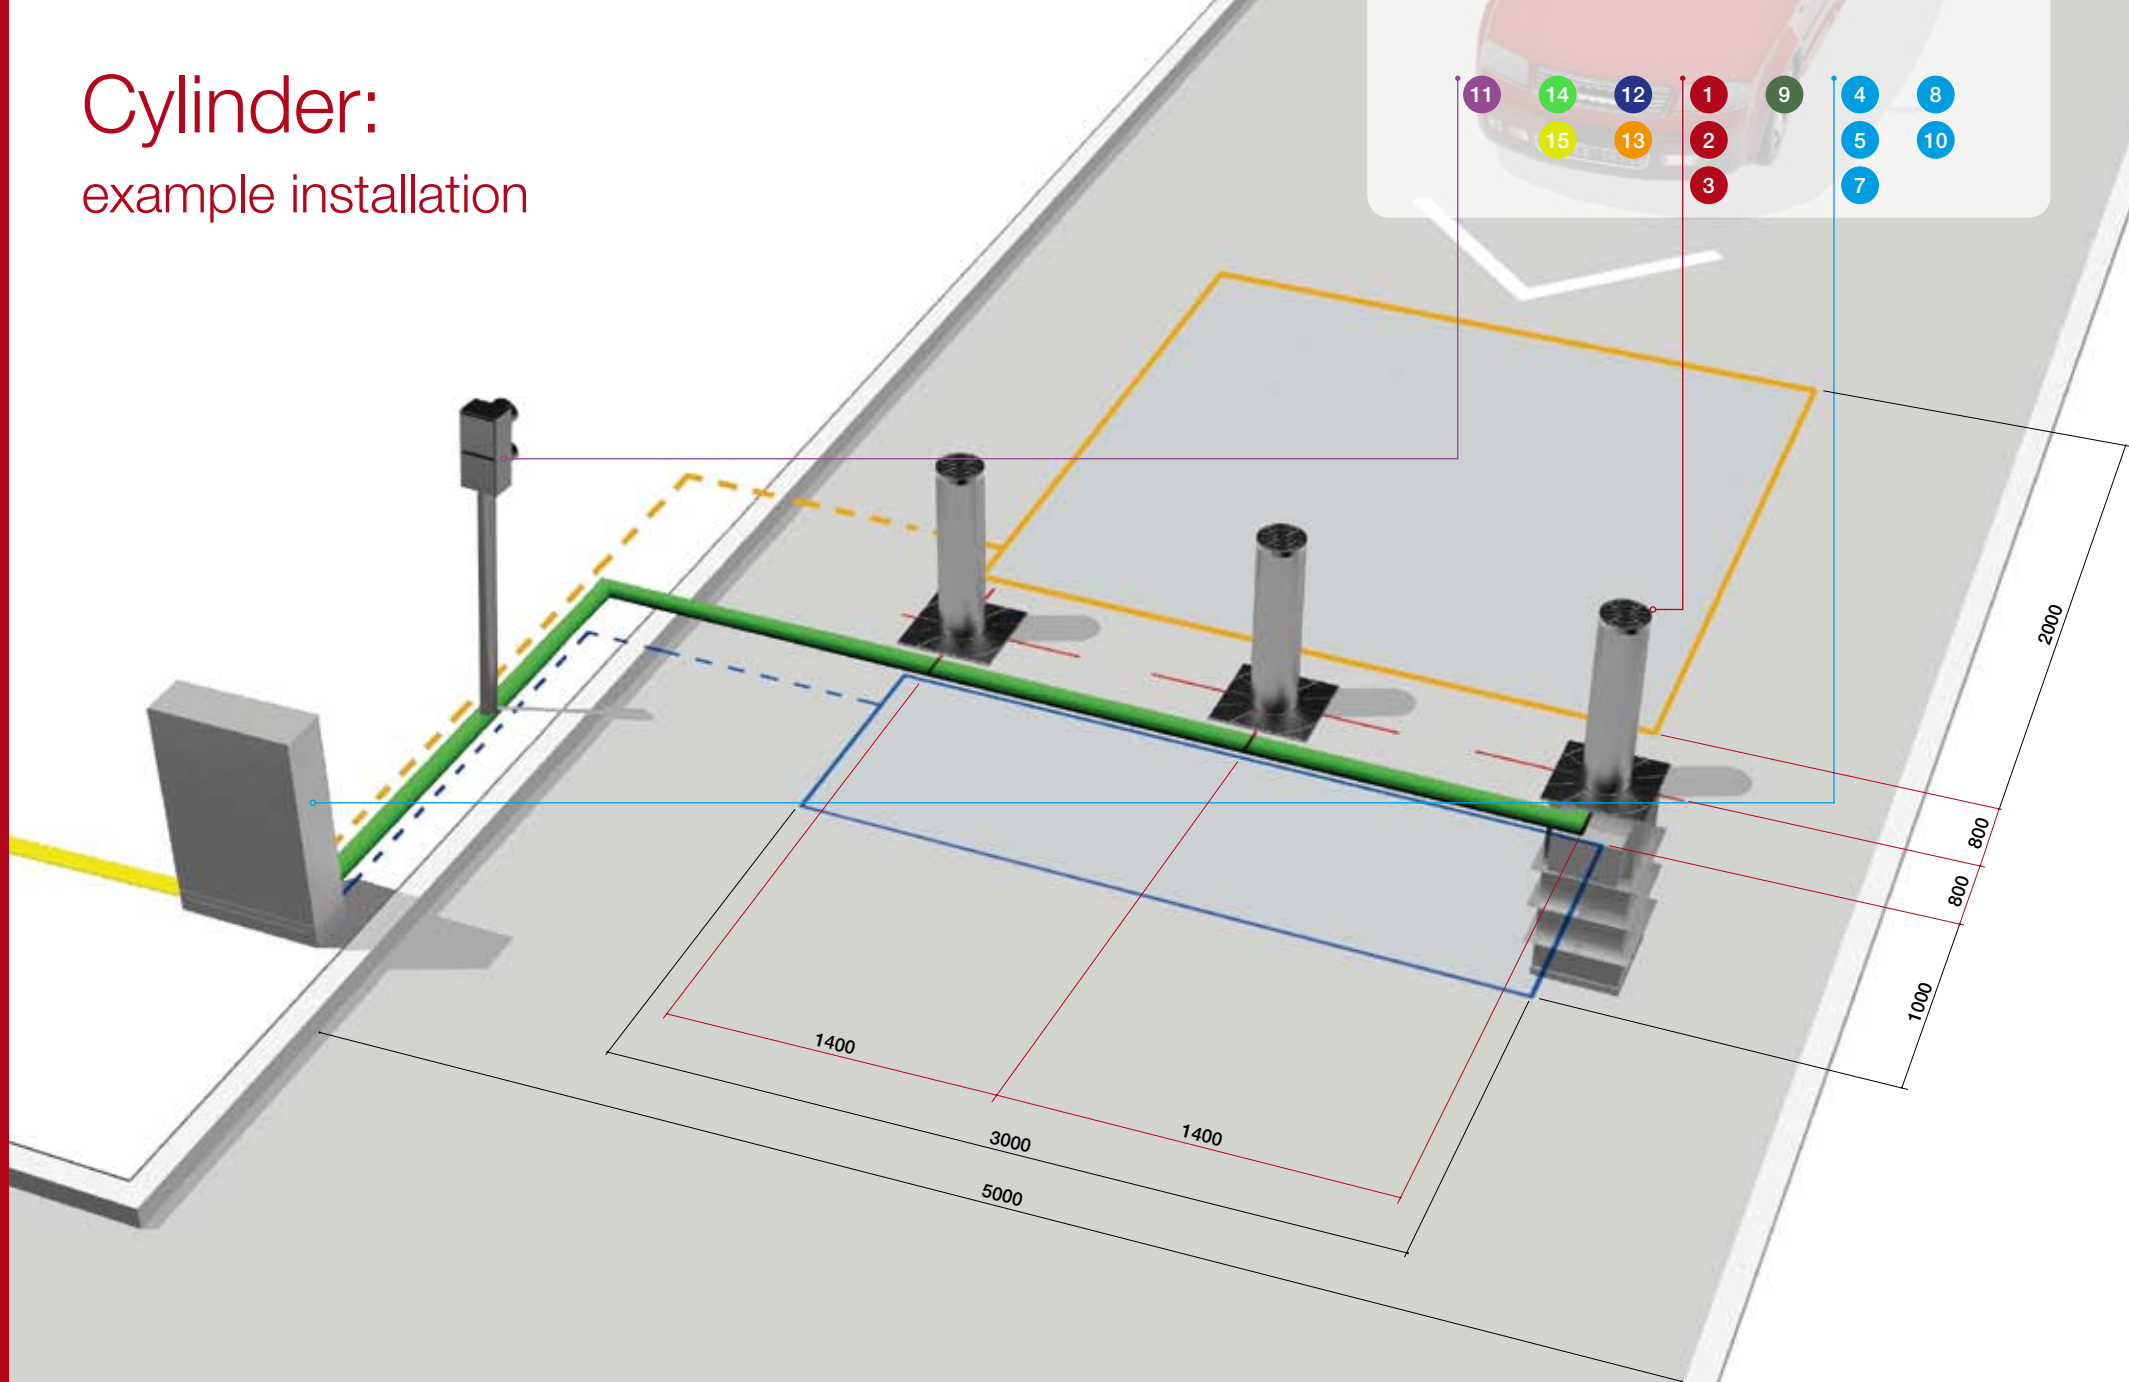

What is Cylinder

Cylinder, Urbaco's cast iron automatic, pneumatic retractable bollard is made to manage access points to both public and private streets. Easy to install and traditionally reliable, it works with low-pressure compressed air, allowing just one technical centre to handle several bollards.

Through remote control commands, like transmitters, proximity cards, and code key pad, the bollard descends into the ground to allow vehicles to pass over it.

Cylinder: example installation

The line dash in **12** and **13** stands for the **length of the loop feeder** and depends on the positioning of the Micro Technical Centre. When choosing the **loop + feeder** combination you need to take into account said lengths as well as length P of the loop perimeter.

Pneumatic Automatic Bollards

Example installation

The drawing represents an installation of CYLINDER Ø 200 mm H 750 mm retractable bollards with luminous crown. The negative security device allows the bollard to stay in the fully-surfaced position even during blackouts. The bollards are controlled by CC1U200PPR Micro Technical Centre with a 5 L air supply. Two loops are used and the functioning logic controls both exit and entrance.

1 n° 3 **BPCLE75CLG**

Pneumatic automatic retractable bollard
H = 750 mm Ø = 200 mm with luminous crown.

2 n° 3 **BOCOFE959**

Disposable folding box in galvanised steel sheeting.

3 n° 3 **BOCLPAR**

Non-return device.

4 n° 1 **CC0011PPR**

Micro Technical Centre complete with U200 control board to manage one access point without metal mass detection. With 5 L air supply.

5 n° 1 **COAF43S**

Snap-in 433.92 MHz radiofrequency card for the City3 and City6 controllers.

6 n° 1 **001TOP-432NA**

Multi-user 433.92 MHz two-channel transmitter with 4.096 combinations and auto-learning.

7 n° 1 **001TOP-A433N**

Antenna.

8 n° 1 **001TOP-RG58**

Antenna cable.

9 n° 3 **KITBEA25**

Link up Kit for 1 automatic retractable bollard made up of: one air hose, electric cable, two L-fittings and one T-fitting.

10 n° 1 **COU200ECSC**

Functioning logic for the U200 control board: controlled entrance and exit.

11 n° 1 **CPF1RV08**

Red/Green Led traffic light Ø 100 mm mounted on a 180° swivel post.

12 n° 1 **COBCL0825**

Magnetic loop and loop feeder.

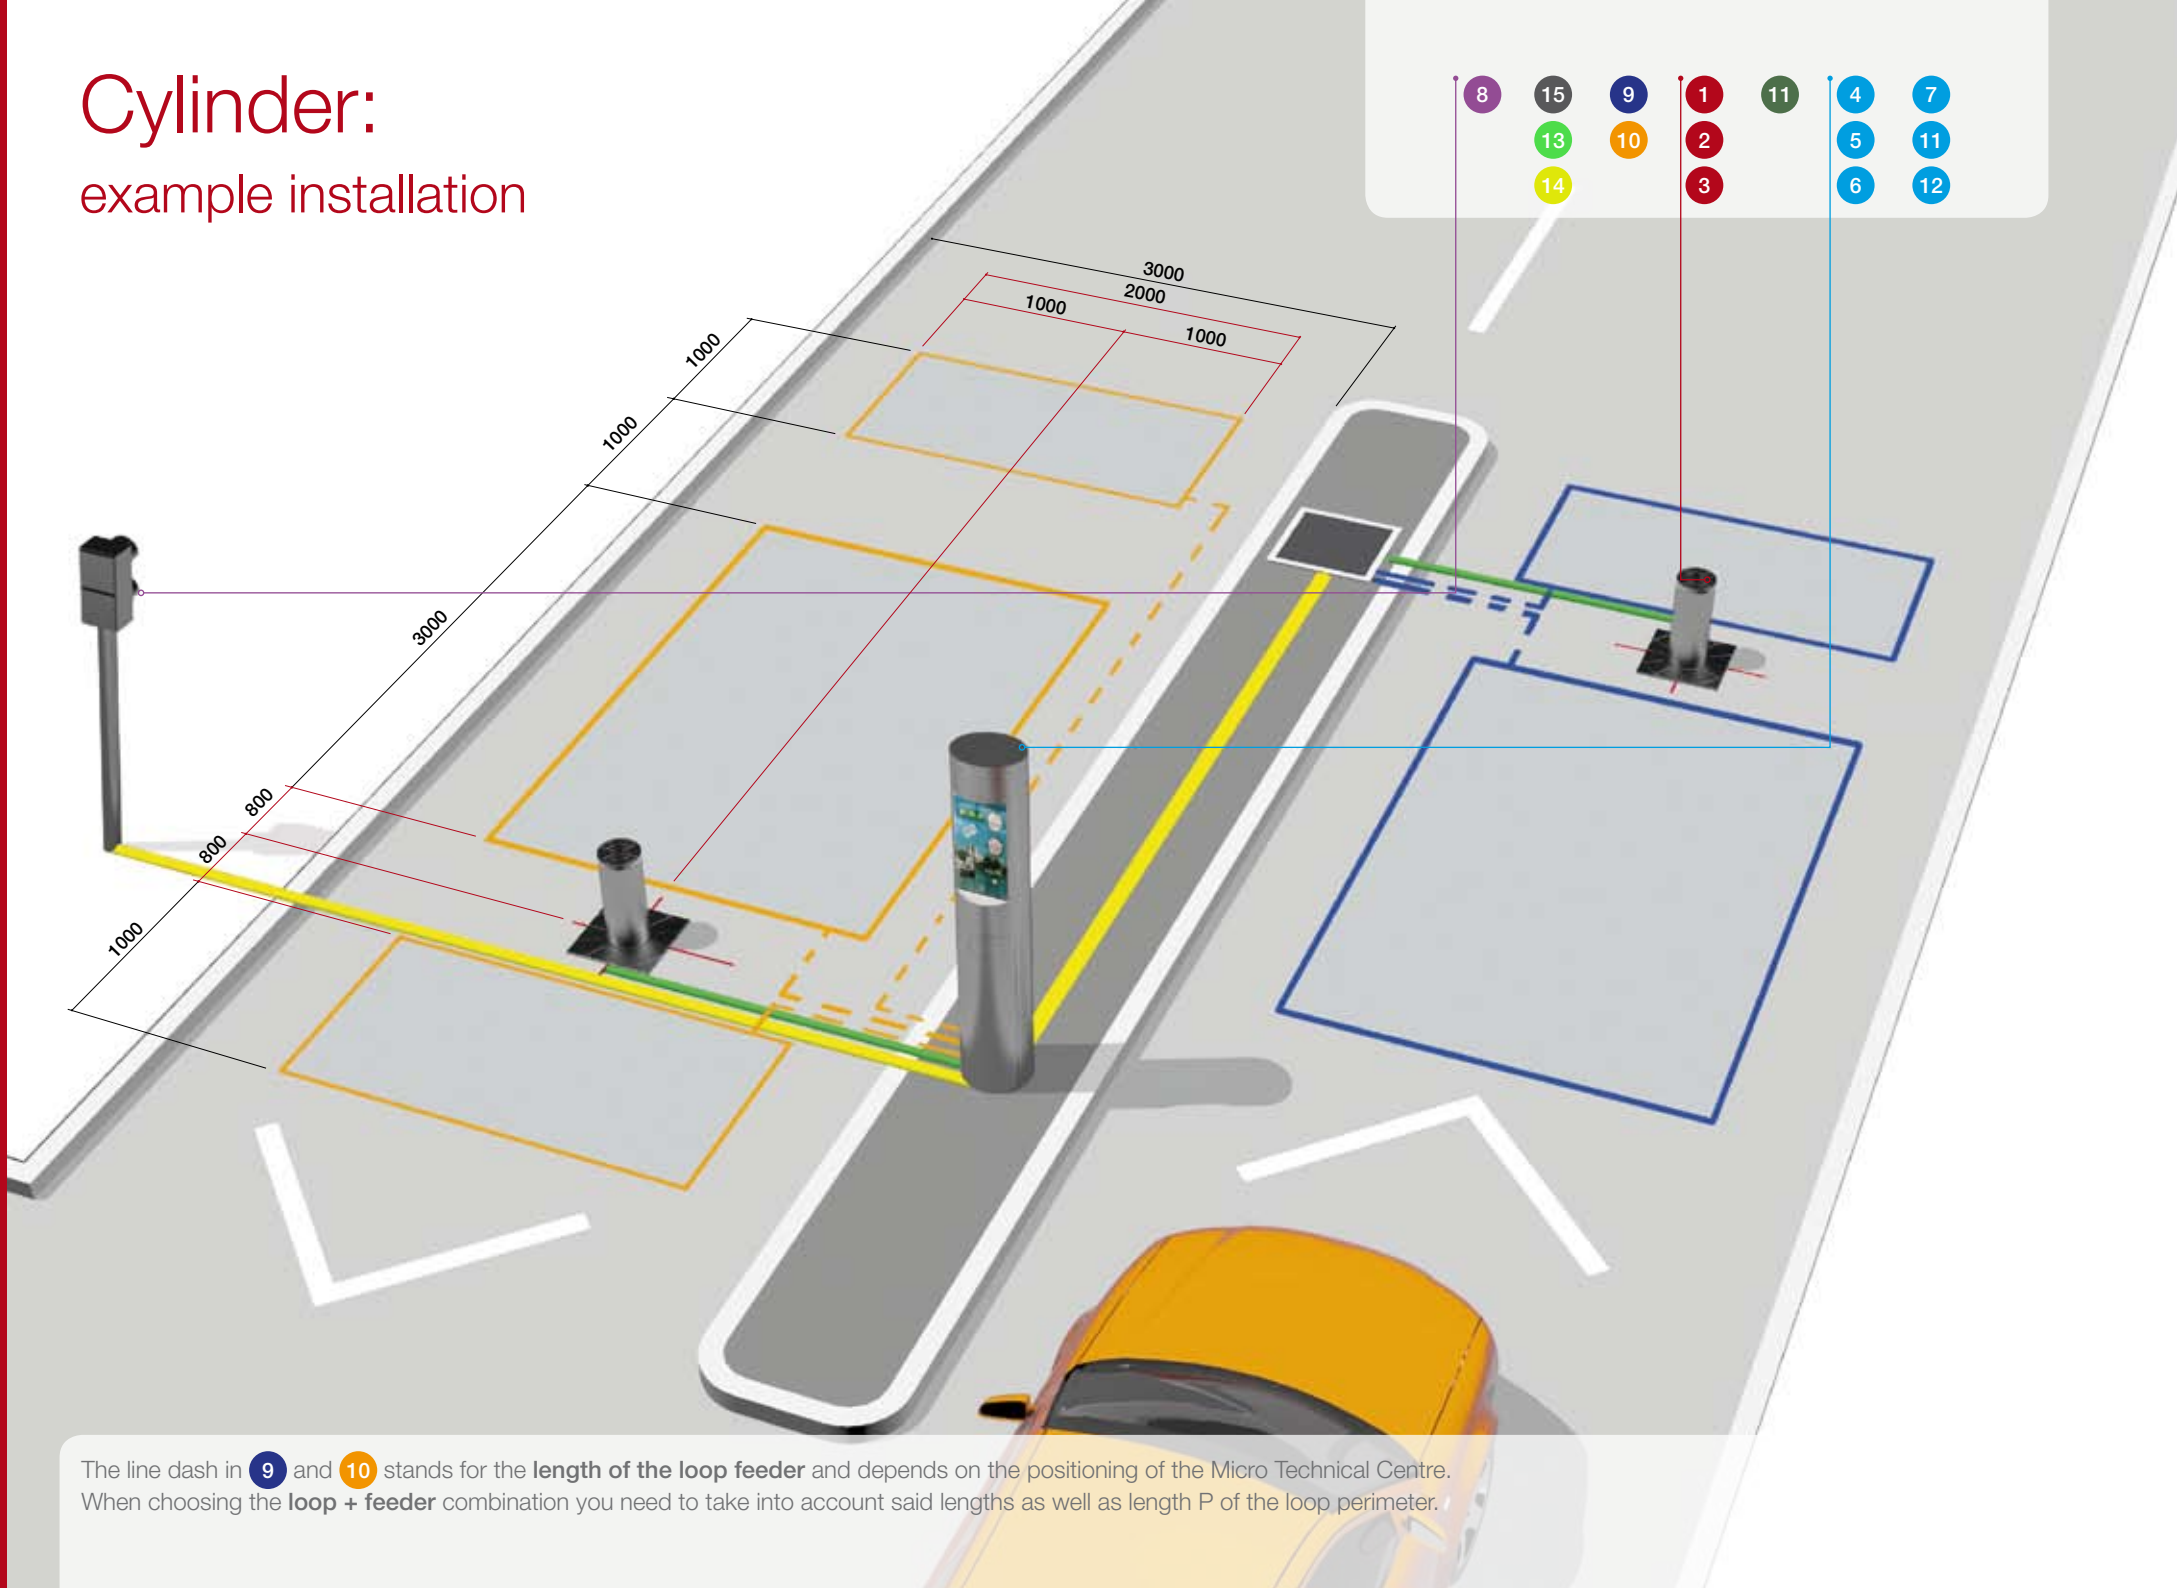

13 n° 1 **COBCL1025**

Magnetic loop and loop feeder.

14 Tubing Ø 90 mm.

15 Tubing Ø 40 mm.

Cylinder: example installation

The line dash in **9** and **10** stands for the **length of the loop feeder** and depends on the positioning of the Micro Technical Centre. When choosing the **loop + feeder** combination you need to take into account said lengths as well as length P of the loop perimeter.

Example installation

The drawing represents an installation of CYLINDER Ø 250 mm H 500 mm retractable bollards with luminous crown. The negative security device allows the bollard to stay in the fully-surfaced position even during blackouts. The bollards are controlled by a City6 C6S10000PS with PLC AT224 control unit. The unit features a transponder sensor for cards. Two loops are used and the functioning logic requires that the exit is free and that the entrance is controlled by a TSP01 reader.

1 n° 2 **BPCLPF50CLG**

Pneumatic automatic retractable bollard
H = 500 mm Ø = 250 mm with luminous crown.

2 n° 2 **BOCOFF671**

Disposable folding box in galvanised steel sheeting.

3 n° 1 **BOCLPAR**

Non-return device.

4 n° 1 **C6S10000PS**

Complete PLC AT224 standard control unit to manage one access point without metal mass detection.

5 n° 1 **COTSP01**

Stand-alone transponder sensor for cards, keychains and TAG for up to 250 users for the City3 and City6 control units.

6 n° 1 **COAT224EOSC**

Functioning logic for the PLC AT224: controller entrance and exit.

7 n° 1 **COAT224SA**

Functioning logic for the PLC AT224: automatic exit.

8 n° 1 **CPF1RV08**

Red/Green Ø 100 mm traffic light on 180° swivel post.

9 n° 1 **COBCLC25**

Loop and loop feeder for functioning logic with controller entrance and exit.

10 n° 1 **COBCLSA25**

Loop and loop feeder for functioning logic with automatic exit.

11 n° 2 **KITBEA25**

Link up Kit for 1 automatic retractable bollard made up of: one air hose, electric cable, two L-fittings and one T-fitting.

12 n° 1 **KITCITY6**

Cemented foundation base for the City6.

13 Tubing Ø 90 mm.

14 Tubing Ø 40 mm.

15 Half-way pit 400 x 400 mm.

Cylinder: example installation

The line dash in **8** and **9** stands for the **length of the loop feeder** and depends on the positioning of the Micro Technical Centre. When choosing the **loop + feeder** combination you need to take into account said lengths as well as length P of the loop perimeter.

Pneumatic Automatic Bollards

Example installation

The drawing represents an installation of CYLINDER Ø 200 mm H 500 mm automatic pneumatic retractable bollards. The negative security device allows the bollard to stay in the fully-surfaced position even during blackouts. The bollards are controlled by CC10000P with PLC Logo! Micro Technical Centre.

Two loops are used and the functioning logic controls both exit and entrance.

- 1 n° 3 **BPCLPE50**
Pneumatic automatic retractable bollard H = 500 mm Ø = 200 mm.
- 2 n° 3 **BOCOFE664**
Disposable folding box in galvanised steel sheeting.
- 3 n° 1 **BOCLPAR**
Non-return device.
- 4 n° 3 **KITBEA25**
Link up Kit for 1 automatic retractable bollard made up of: one air hose, electric cable, two L-fittings and one T-fitting.
- 5 n° 1 **CC10000P**
Micro Technical Centre complete with PLC LOGO! for managing one access point without metal mass detection.
- 6 n° 1 **COLOGOSA**
Functioning logic for the PLC LOGO!: automatic exit.
- 7 n° 1 **CPF1RV08**
Red/Green Ø 100 mm traffic light on 180° swivel post.
- 8 n° 1 **COBCL1025**
Loop and loop feeder.
- 9 n° 2 **COBCL0825**
Loop and loop feeder.
- 10 Tubing Ø 90 mm.
- 11 Tubing Ø 40 mm.

The range

Basic elements

BPCLPE50
Pneumatic automatic retractable bollard
H = 500 mm Ø = 200 mm.

BPCLPE75CLG
Pneumatic automatic retractable bollard
H = 750 mm Ø = 200 mm with luminous crown.

BPCLPF50CLG
Pneumatic automatic retractable bollard
H = 500 mm Ø = 250 mm with luminous crown.

TPUGU
RAL 7016 structured varnishing.

TPRALSTD
Standard RAL varnishing. Colours: RAL 9005 black, RAL 3020 red or RAL 6009 green.

TPOFRAL
Non-standard RAL varnishing (EXCLUDING RAL 7016, 9005, 3020 and 6009).

TPURALSP
Special non-RAL varnishing.

BOCOFE664
Folding lost casing in galvanised steel sheeting.

BOCOFE959
Folding lost casing in galvanised steel sheeting.

BOCOFF671
Folding lost casing in galvanised steel sheeting.

BOEVB
NEGATIVE security device.

BOCLPAR
Non-return device.

Command elements

CC1U200P
Micro Technical Centre complete with U200 control board for managing one access point without metal mass detection.

CC10000P
Micro Technical Centre complete with PLC LOGO! control board for managing one access point without metal mass detection.

CC1U200PPR
Micro Technical Centre complete with U200 control board for managing one access point without metal mass detection. With 5L air supply.

C3S1U200P
Standard control unit complete with U200 electronic board for managing one access point without metal mass detection. RAL 7016 color.

C3S10000P
Standard control unit complete with PLC AT224 for managing one access point without metal mass detection. RAL 7016 color.

C3S10000PS
Complete PLC AT224 standard control unit to manage one access point without metal mass detection. RAL 7016 color.

KITCITY3
Cemented foundation base for the City3.

C6S1U200P
Standard control unit complete with U200 control board for managing one access point without metal mass detection. RAL 7016 color.

C6S10000P
Standard control unit complete with PLC LOGO! for managing one access point without metal mass detection. RAL 7016 color.

C6S10000PS
Complete PLC AT224 standard control unit to manage one access point without metal mass detection. RAL 7016 color.

KITCITY6
Cemented foundation base for the City6.

Logics

COU200ECSC
Functioning logic for the U200 control board: controlled entrance and exit.

COU200ECSA
Functioning logic for the U200 control board: controlled entrance and automatic exit.

COU200SA
Functioning logic for the U200 control board: automatic exit.

COLOGOEOSC
Functioning logic for the PLC LOGO!: controlled entrance or exit.

COLOGOECSC
Functioning logic for the PLC LOGO!: controlled entrance and exit.

COLOGOECSA
Functioning logic for the PLC LOGO!: controlled entrance and automatic exit.

COLOGOSA
Functioning logic for the PLC LOGO!: automatic exit.

COAT224EOSC
Functioning logic for the PLC AT224: controlled entrance or exit.

COAT224ECSC
Functioning logic for the PLC AT224: controlled entrance and exit.

COAT224ECSA
Functioning logic for the PLC AT224: controlled entrance and automatic exit.

COAT224SA
Functioning logic for the PLC AT224: automatic exit.

Note:

* Item supplied as a non-fitted accessory

Metal mass detectors

* RDET1CM

Single-channel metal mass detector with memory function.

* RDET2CM

Bi-channel metal mass detector with memory function.

* RSUPDET

Support structure for mounting the detector.

Loops and loop feeders

COBCL0425

Magnetic loop and loop feeder.

Loops and loop feeders for logics

COBCLEC25

Loop and loop feeder for functioning logic with controlled entrance or exit.

COBCLEC50

Loop and loop feeder for functioning logic with controlled entrance or exit.

COBCLEA25

Loop and loop feeder for functioning logic with controlled entrance and automatic exit.

COBCLEA50

Loop and loop feeder for functioning logic with controlled entrance and automatic exit.

COBCLES25

Loop and loop feeder for functioning logic with controlled entrance and exit.

COBCLES50

Loop and loop feeder for functioning logic with controlled entrance and exit.

COBCLSA25

Loop and loop feeder for functioning logic with automatic exit.

COBCLSA50

Loop and loop feeder for functioning logic with automatic exit.

Note:

The code for this product is always composed of the same five letters (COBCL) and four numbers. The first two numbers stand for the loop perimeter. Urbaco provides eight different loop perimeters: 04 m, 06 m, 08 m, 10 m, 12 m, 14 m, 16 m, and 18 m. The last two numbers stand for the loop feeder length which can span from 25 m to 50 m. For instance, if the loop perimeter is 14 m and the loop must be at least 25 m the code you must order is: COBCL1425.

The range

Selectors and transponders

001TOP-432NA
Multi-user 433.92 MHz two-channel transmitter with 4,096 combinations and auto-learning.

001TOP-434NA
Multi-user 433.92 MHz four-channel transmitter with 4,096 combinations and auto-learning.

001TAM-432SA
Multi-user 433.92 MHz two-channel transmitter with 16,777,216 combinations and auto-learning.

001AT01
Rolling code 433.92 MHz single-channel transmitter with 4,294,967,896 combinations.

001AT02
Rolling code 433.92 MHz two-channel transmitter with 4,294,967,896 combinations.

001AT04
Rolling code 433.92 MHz four-channel transmitter with 4,294,967,896 combinations.

Radio remote control

COAF43S
Snap-in 433.92 MHz radiofrequency card for the City3 and City6 controllers.

COAF43SR
Snap-in 433.92 MHz radiofrequency card for up to 25 001TAM-432SA transmitter for the City3 and City6 controllers.

CORBE4RC
IP54 external 433.92 MHz four-channel receiver, 12 - 24 V AC-DC for up to 500 transmitters, complete with one AT04 master transmitter.

* **001TOP-A433N**
Antenna.

* **001TOP-RG58**
Antenna cable.

Radio transmitters

COS6000
Flush-mounted keypad selector for the City3 and City6 controllers with 1,679,616 combinations.

* **001SET-J**
External key selector with aluminium alloy case, with lock protection door and lock cylinder.

COTSP01
Stand-alone transponder sensor for cards, keychains and TAG for up to 250 users for the City3 and City6 controllers.

* **001TSP01**
Stand-alone transponder sensor for cards, keychains and TAG for up to 250 users.

COLEC6000
Control device for transponder sensors, magnetic loops and magnetic strip cards, complete with software for up to 6,000 users for the City3 and City6 controllers.

RBDGLG
Blank proximity card (read only) with printed number.

* **001CSS**
Natural anodized aluminium post H = 1 m for the SET-J and TSP01.

Note:

* Item supplied as a non-fitted accessory

CPF1RO08

Red/Amber Led traffic light
Ø 100 mm mounted on a
180° swivel post.

CPF1RV08

Red/Green Led traffic light
Ø 100 mm mounted on a
180° swivel post.

CPF2RO08

Red/Amber Led double traffic light
Ø 100 mm mounted on a
180° swivel post.

CPF2RV08

Red/Green Led double traffic light
Ø 100 mm mounted on a
180° swivel post.

CMF1RO08

Red/Amber Led traffic light
Ø 100 mm complete with anchoring brackets.

CMF1RV08

Red/Green Led traffic light
Ø 100 mm complete with anchoring brackets.

KITBEA25

Link up Kit for 1 automatic retractable bollard
made up of: one air hose, electric cable, two
L-fittings and one T-fitting.
Cable length = 25 m.

KITBEA50

Link up Kit for 1 automatic retractable bollard
made up of: one air hose, electric cable, two
L-fittings and one T-fitting.
Cable length = 50 m.

KITBEA100

Link up Kit for 1 automatic retractable bollard
made up of: one air hose, electric cable, two
L-fittings and one T-fitting.
Cable length = 100 m.

BOCGF50

Heater complete with thermostat.
Power: 50 W.

BOCGF75

Heater complete with thermostat.
Power: 75 W.

COINTSA

Analog interphone for secondary stations with
max reach of 300 m for the City3 and City6
controllers.

RINTC3A

Analog interphone for main station with 1 to 3
directions for the City3 and City6 controllers.

COCAMPH

Colour video camera for the City3 and City6.

RMONTC14A

14-inch monitor for the COCAMPH video camera.

RPUP10

Remote console with one impulse button.

Vendôme

Modern and elegant

Safe and secure all round. With Vendôme you know you have made the right choice, because it is easily integrated in any setting.

Thanks to its 316 L stainless steel coating which makes it unique. Urbaco offers a vast range of products, among which Vendôme sticks out due to its sleek design and multiple applications.

Ministero delle Infrastrutture e dei Trasporti

Omologazione per installazione sul suolo pubblico

protocollo n. 32658 del 1 aprile 2009

Vendôme features

INOX 316L

The signal system

A class II yellow reflecting band to easily signal the fully surfaced bollard.

The bollard

Sturdy and durable and made of 316 L stainless steel. The structure of the integrated rail ensures wear-free sliding over time. Minimal periodic maintenance and minor adjustments are all it takes for it to slide up and down constantly and safely.

The slide ring

Made of plastic, it absorbs any friction with the bollard, while damping noise.

The cover

Provides protection to the bollard thanks to the jacketing which allows energy to be distributed in contrary components, and transmitting it to the buried foundation box.

The box

With four guide rails and built-in Monobloc bar. This system holds the hydraulic jack in place and parallel to the guides.

The disposable folding box

Easy and simple to carry and install, it is made of 10/10 thick, galvanised steel sheeting.

What is Vendôme

Vendôme is ideal for modern architectural settings. It also fits perfectly in historical town centres and areas subject to corrosive agents. It's also suitable for interior furnishing where it adds value to entrance halls at shopping malls, art galleries, etc.

Pneumatic Automatic Bollards

Example installation

The drawing represents an installation of VENDÔME Ø 250 mm H 500 mm pneumatic automatic retractable bollards. The negative security device allows the bollard to stay in the fully-surfaced position even during blackouts. The bollards are controlled by a City3 C3S1U200P control unit with a U200 control board. Two loops are used and the functioning logic controls both exit and entrance with TSP01 reader, interphone RINTC3A and traffic light.

- 1 n° 2 **BPVDMF50**
Pneumatic automatic retractable bollard H = 500 mm Ø = 200 mm.
- 2 n° 2 **BOCOFF671**
Folding disposable galvanised sheet metal case.

14-inch monitor for the COCAMPH video camera.

RPUP10

Remote console with one impulse button.

Semi-automatic Bollards

Semi-automatic bollards

As easy as using your house key

Release the bollard using the key, press the bollard cover with your foot and push it into the ground. The bollard locks into place automatically.

It's simple, easy, and Urbaco! Release the bollard again using the key and the bollard rises by itself. The semi-automatic bollard is Urbaco's proposal for managing little frequented spaces.

For example, a city square that is open to the public only a few times a month, or a reserved area of sorts.

Cylinder

Semi-automatic bollards

Tradition that stays fashionable

Urbaco owes its success to the quality of its products, their vast range and many details. Aesthetics has always been at the forefront, for the importance of integrating with any architectural style and has always been a starting point in the company's research and development. Cylinder is successful also thanks to its adaptability to the most diverse of contexts.

Vendôme

Semi-automatic bollards

Always and everywhere

Vendôme owes its good fortune to the material that makes it unique at Urbaco. The stainless steel of the guide lining makes it the ideal choice to be employed in harsh atmospheric settings where its corrosion resistant qualities come into their own.

Vendôme, the solution for managing access points in ports and maritime stations.

Cylinder and Vendôme features

The material

Cylinder is made of nodular cast iron – while Vendôme is also lined with 316 L stainless steel.

Signalling

A class II reflective band makes the bollard highly visible when fully surfaced.

The cover

To protect the bollard when it is below ground.

The customised key

The semi-automatic bollards are all supplied with an 11 mm triangle key; other key shapes are available on request.

The key lock

A small trap door protects the keylock.

INOX 316L

RAL 7016

RAL 6009

RAL 3020

RAL 9005

Semi-automatic bollards

Practical, simple and comfortable

- 1. Insert the key into the lock and turn it clockwise: the bollard releases.
- 2. Push the bollard downwards.
- 3. The bollard locks into place. Remove the key.
- 4. Insert the key into the lock.
- 5. Turn the key counter-clockwise: the bollard automatically releases and surfaces to lock into place.

The range

Basic elements

BMCLPE50
Semi-automatic retractable bollard
CYLINDER
H = 500 mm Ø = 200 mm.
Note: folding lost casing
BOCOFE664

BMCLPF50
Semi-automatic retractable bollard
CYLINDER
H = 500 mm Ø = 250 mm.
Note: folding lost casing
BOCOFF671

BMCLPE75
Semi-automatic retractable bollard
CYLINDER
H = 750 mm Ø = 250 mm.
Note: folding lost casing
BOCOFE959

TPUGU
RAL 7016 structured varnishing.

TPRALSTD
Standard RAL varnishing. Colours: RAL 9005
black, RAL 3020 red or RAL 6009 green.

TPOFRAL
Non-standard RAL varnishing (EXCLUDING RAL
7016, 9005, 3020 and 6009).

TPURALSP
Special non-RAL varnishing.

BMVDMF50
Semi-automatic retractable bollard
VENDÔME
H = 500 mm Ø = 250 mm.
Note: folding lost casing
BOCOFF671

Folding lost casings

BOCOFE664
Folding lost casing in galvanised steel sheeting.

BOCOFF671
Folding lost casing in galvanised steel sheeting.

BOCOFE959
Folding lost casing in galvanised steel sheeting.

Keys

BOCLESL11
Cast iron E11 triangle key.

BOTIVE11

Release rod for E11 triangle lock.

Setting up the pits

Setting up the pits

After removing the black top, dig a pit and lay some geotex material onto the bottom to prevent the gravel from sinking over time.

Fill with gravel and lay a PVC drain pipe in the centre. Cast an initial layer of cement without obstructing the drain pipe. Once this first layer of cement is dry, cast the second layer of cement. When the second layer is also cast, lay the corrugated tube and secure it with cement. To lay the lost casing see the relative documentation which provides instructions and measurements for the pits.

The box needs to be properly positioned with respect to the direction of travel of vehicles.

Bollard				Lost casing			Pit	
Model	ø	H	Code	Code	La (mm)	Hc (mm)	Le (mm)	He (mm)

Fixed and Removable Bollards

Fixed and removable bollards

An eye-catching advantage

A product line to complete the offer, that is, Urbaco fixed and removable bollards. The shapes and dimensions are the same as for automatic and semi-automatic retractable bollards. But they provide a simple and affordable response to applications that place urban furnishing, area restriction and control over that of vehicle flow management, when passage is required only occasionally.

Luxor

PHARMACIE
du Grand-Lancy

Fixed and removable bollards

Luxor

Removable and fixed Luxor: both of these models will bestow harmony when furnishing a pedestrian area or when occasionally opening an access point. They will function as aesthetic reference points designed according to the shapes and spirit of the locations. Just like their retractable versions, the fixed and removable Luxors are fitted with a yellow or white reflective band and black-painted top.

Cylinder

Fixed and removable bollards

Cylinder

Smooth and sombre, it is elegant and soft-spoken and fits everywhere, in any architectural or urban setting. It can definitely close an access point or open it temporarily on particular occasions. The fixed and removable Cylinder: eternal and transcending trends – truly appealing.

Vendôme

Fixed and removable bollards

Vendôme

Removable and fixed Vendômes: this stainless steel product line, just as the city it is named after, blends a refined material with modernity. It is most suited for any prestigious setting, by adding that extra touch to architects' projects. It fits right into the urban furnishings of both historical town centres or indoor locations. It lets you turn an area into a pedestrian-only zone or accessible only at certain times. The right choice is Vendôme. Keeping up with the times!

The range

REMOVABLE bollards

BALUXE60-R
Removable bollard
LUXOR
H = 600 mm Ø = 200 mm.
RAL3002 colour.

BALUXE60-G

Fixed bollard
CYLINDER
H = 750 mm Ø = 200 mm.
RAL7016 colour.

BSVDMF50S
Fixed bollard
VENDÔME
H = 500 mm Ø = 250 mm.

Fixator ®

BOFIXP11S
Fixator® system complete with release device, and E11 triangle key.
Without cover.

BOFIXCS
Fixator® system.

EMBS200INOX
Cementable base for stainless steel bollard, Ø 200 mm and 250 mm, closing system with lock on the bollard.

BOFIXCOF
Cast iron cover for Fixator®.

Keys

BOCLES11

Cast iron E11 triangle key.

Complementary accessories

BOBRB

White reflective bands for fixed and removable bollards.

BOBRJ

Yellow reflective bands for fixed and removable bollards.

Software and control systems

Sygma II

Your spaces are under control

Syigma II is Urbaco's software for remote centralised management and control of access points. Retractable automatic bollards, barriers, videophone and interphone services.

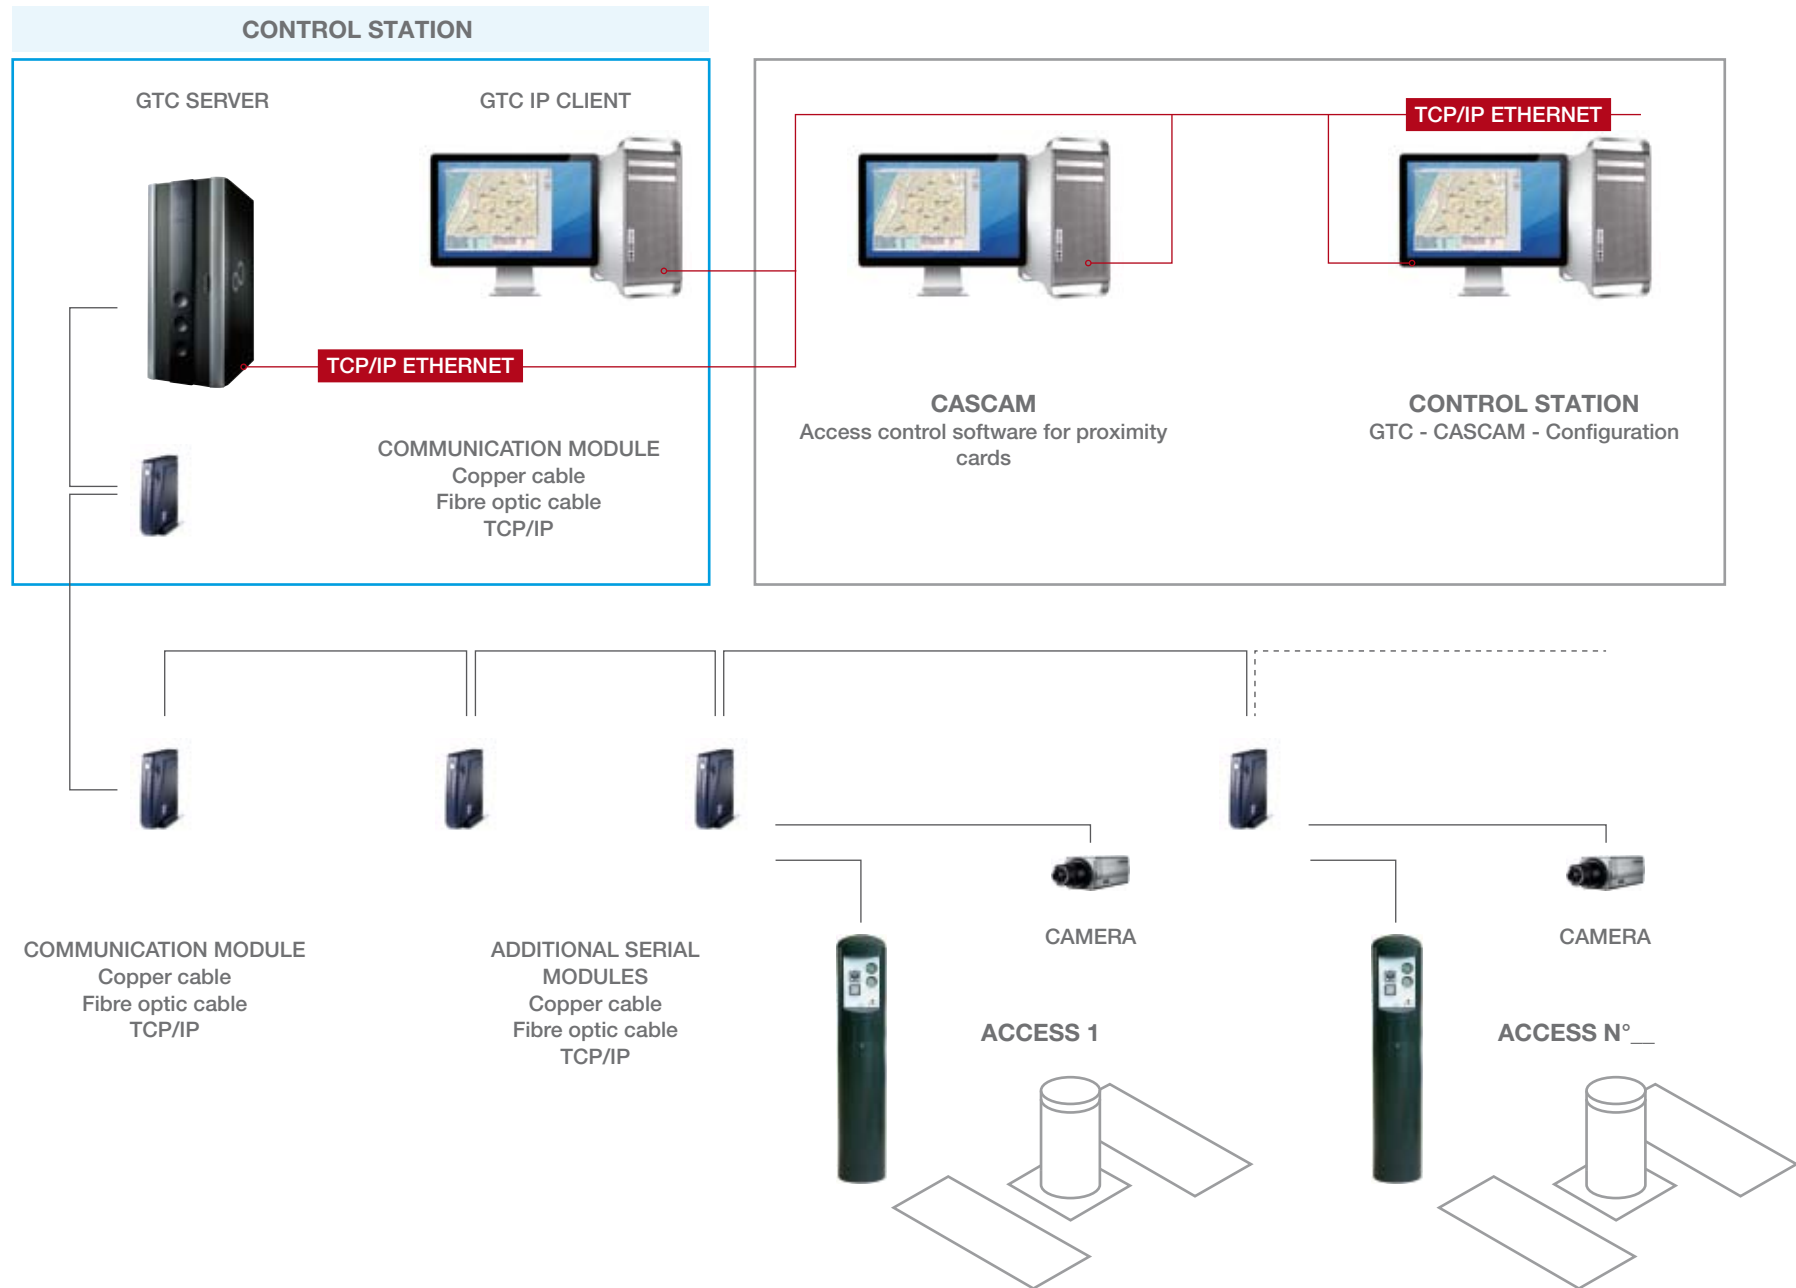

It works online by using current communication methods and can be installed on one or more work stations.

It is composed of the following modules:

- NEXUS:
core of the communication system.
- GTC:
the synoptic centralised management module for the controlled areas.
- CASCAM:
access control software for proximity cards
- CASCAM Light:
Software for stand-alone access control.
- ARCHIVES:
archive and statistical data management tools.

Standard configuration

The standard functions

- Ergonomic interfaces
- IP network functions, internet or local
- Easy updating
- Exportable in Word, Excel and standard XML
- Automatic email
- Automatic creation of PDF files
- Management of access rights to computer functions (via master card or login)
- Language change over while functioning (handles 22 languages)
- 3D visuals of graphics and access points in real time (OpenGL, DirectX)
- Conversion into Access, dBase, Text, Oracle, XML, etc...

The synoptic plan

Features

- Remote access command (simple opening of with ticket, force the bollard into the ground in case of emergency).
- Visual display of general status of the access points (bollard retracted/surfaced, in motion, active loop or non-functioning, etc.).
- General information on access points for direct diagnosis of the slave devices (bollards, command panels with PLC, magnetic loops, compressors, traffic lights, emergency buttons, clocks, readers, connections, etc.), event, alarm and malfunctions report, with 3D display in real time.
- Configuration of parameters and times in real time.
- Configuration of the parameters and timing of each access point.
- Automatic openings for the programming of the daily time slots openings for access points.
- Management of events and alarms with real time display.
- Works form different work stations for total or partial management (both in terms of location from which the checks are made, as well as in terms of the type of service being handled. For example: a GTC dedicated to controlling and maintaining passage flows, a GTC handled by the municipal police for controlling opening points (complete with video and interphone) and a GTC handled by a third party connected to the police for night-time control.

Handling information

EVENTS report

The events report is viewable in real time, allowing for analytical control of the access point being checked.

ALARMS report

The alarms report is viewable in real time, allowing for analytical control of the access point being checked.

FILES and STATISTICS

The Files program allows you to extract files of event according to different criteria. These events can come from different access sites or from the computer itself. After making an event search, the Stats function allows you to count by hour or day the recurrences of the events and view the data in graphic form.

Some data

- 65,535 access.
- 6,000 CARDS per reader (expandable to 12,000).
- 65,535 x 6,000 users.
- 70 different event and / or alarms (expandable).
- Unlimited number of recordable events.
