ASSA ABLOY

Europa Shopping Center – Vilnius, Lithuania

ASSA ABLOY, the global leader in door opening solutions

Whether you are running a small service store or managing a giant shopping galleria, we will produce, install and maintain the best solution for your needs. Besam has been a leading provider of entrance solutions for the retail sector for more than 40 years now. We help shopping centres, supermarkets, specialty retailers, petrol stations and discount stores to get the best possible results in relation to aesthetics, customer flow, accessibility, safety, physical location and anything else that might matter to your entrance.

Entrance solutions for the retail sector

On display

First impressions last. A Besam product in your storefront ensures an attractive and welcoming entrance for your customers.

When functionality and design collaborate, you can enjoy the safety of the mechanical operation combined with the contemporary look of our products.

In addition to three main product lines and world-leading service and maintenance, Besam can also provide you with complementary products such as rollershutters and air curtains. We offer a variety of specialised versions of our products to meet customers' various demands.

Design and functionality

Revolving Doors

Revolving doors have high traffic capacity and are an attractive and welcoming entrance solution. The revolving door system is particularly useful when you want to control the indoor climate since it leaves no draught and is large enough for shopping carts, perambulators or cargo trolleys.

IKEA – Shanghai, China

Sliding Doors

This product is suitable for large traffic flows at shopping centres or supermarkets. A sliding door is a common solution for front entrances or indoor passages. Sliding doors are available in a standard version as well as telescopic, all-glass and in different curved styles.

BP Connect, Warsaw - Poland

Swing Doors

A swing door set-up claims a minimum of space and provides a maximum of clear opening width. The swing door application is excellent for creating and maintaining security, smoke and fire zones. Swing doors are rugged and reliable and the operator is suitable for automation of existing manual doors and retrofits – allowing you to upgrade doors in a very cost effective way.

C.C. Boulogne – Paris, France

1 Main entrance

– shopping mall, retail shop and hotel

The revolving door provides an aesthetically pleasing entrance while effectively separating the outdoor and indoor environments and reducing draughts. When a 2-wing UniTurn revolving door is used, pedestrians with baby buggies, luggage, and supermarket trolleys can be conveniently accommodated. Combined with an air curtain, this entrance solution can help reduce heating and cooling costs.

2 Inside doors in a shopping mall

Large and small retail shops and even boutiques inside the shopping mall can benefit from automatic sliding doors equipped with radar devices, resulting in easy access for customers. At the same time this aesthetic solution is a good way to close a merchant's shopping area when needed. Combined with a roller shutter, the security during non-business hours is maximised.

3 Fire proof separation by the store room (warehouse)

– shopping mall and retail shop

By using swing or sliding door automation on fireproof doors separating the shop or another part of the building from the storeroom (or warehouse), these doors will no longer be an obstruction to daily work traffic. Automation also puts expensive fireproof doors at less risk for damage, which increases safety and above all extends the lifetime of the doors.

4 Safety compartments in corridors

– hotel and shopping mall

Fire doors in corridors and doors into enclosed areas can be automated via radar devices. This helps to improve access around the building, retain the indoor climate and lower noise, as well as reduce damage to the doors themselves.

5 Cold room

– retail shop and hotel restaurant

With an automated door and a non-heating air curtain, complete separation is possible between the warm and cold areas of a grocery store or commercial kitchen with cold room. Retail shops can even create an easy walk-through for their customers to the cold store area.

6 Separation kitchen / restaurant / coffee shop

– hotel shopping mall and petrolstation

A perfect separation is possible with automated swing and sliding doors between the kitchen and the restaurant. This will reduce the work noise and prevent kitchen odours from entering the restaurant. At the same time, servers will have much easier access by not having to push or pull open the doors while their hands are full. The door leaves will be less damaged, which increases the lifetime of the doors and reduces the long-term costs. This is especially true for expensive fireproof doors.

7 Loading bay areas

– shopping mall, hotel and retail shop

Rollershutters provide additional security to an area which can often be left unattended.

8 Public toilets for disabled

– shopping mall, hotel and retail shop

Disabled users have a convenient way of automatically opening the doors to their dedicated facilities. The system incorporates electronic locking and an emergency override system. This can help reduce the need for personal assistance.

9 General staff entrance

A sliding or swing door solution can be integrated with an access control system for acknowledging when staff members are on or off the premises.

10 Handicap room entrance – hotel

A single swing door operator, retrofitted to existing hotel room doors and integrated with an access control system and electric lock unit, makes a hotel much more friendly and welcoming to disabled guests. Even the bathroom/WC doors can be automated with swing or sliding doors to improve access.

11 Entrance and exit doors in petrol stations

Using automatic sliding doors at the entrances and exits of petrol stations will give not only disabled people easy access, it will improve the flow of heavy pedestrian traffic in and out of the building. It reduces draughts indoors while keeping the smell of gasoline and vehicle exhaust outside. In combination with an air curtain and even a roller shutter, the petrol station shop will increase its comfort and night security.

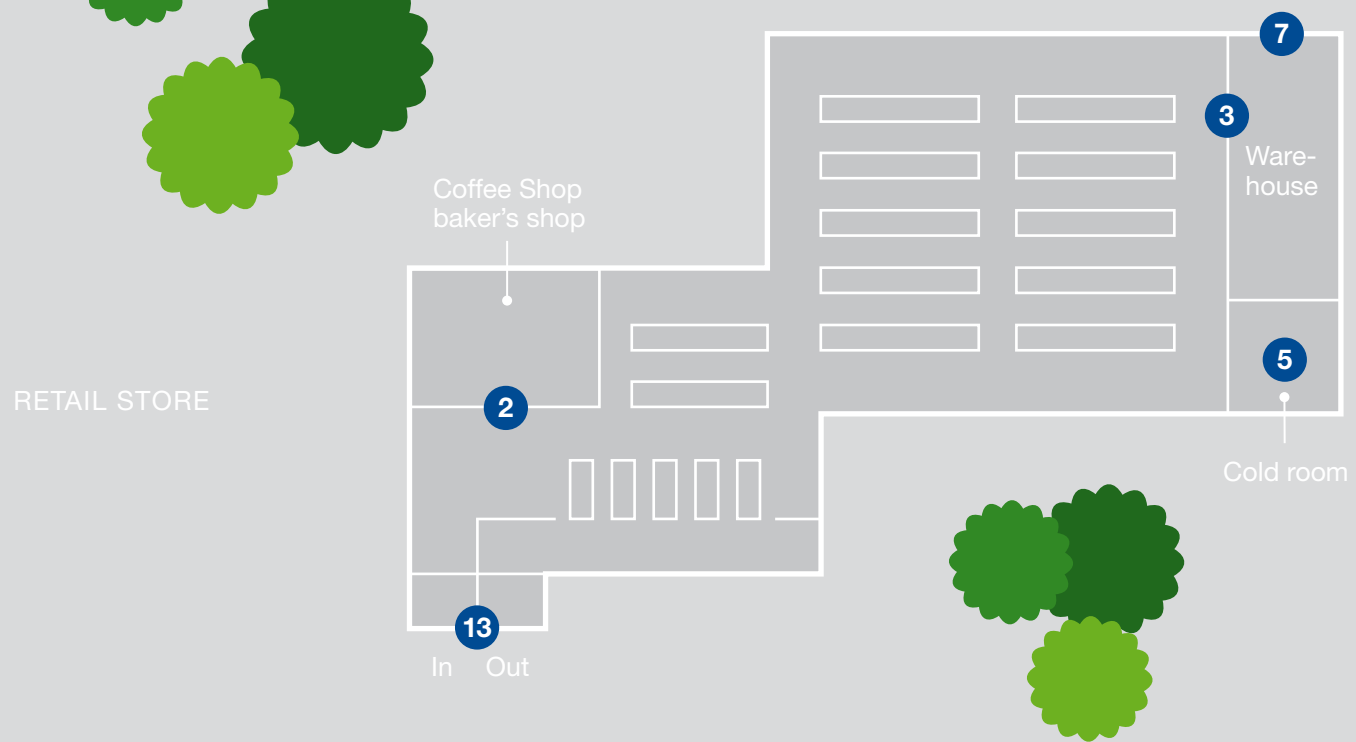

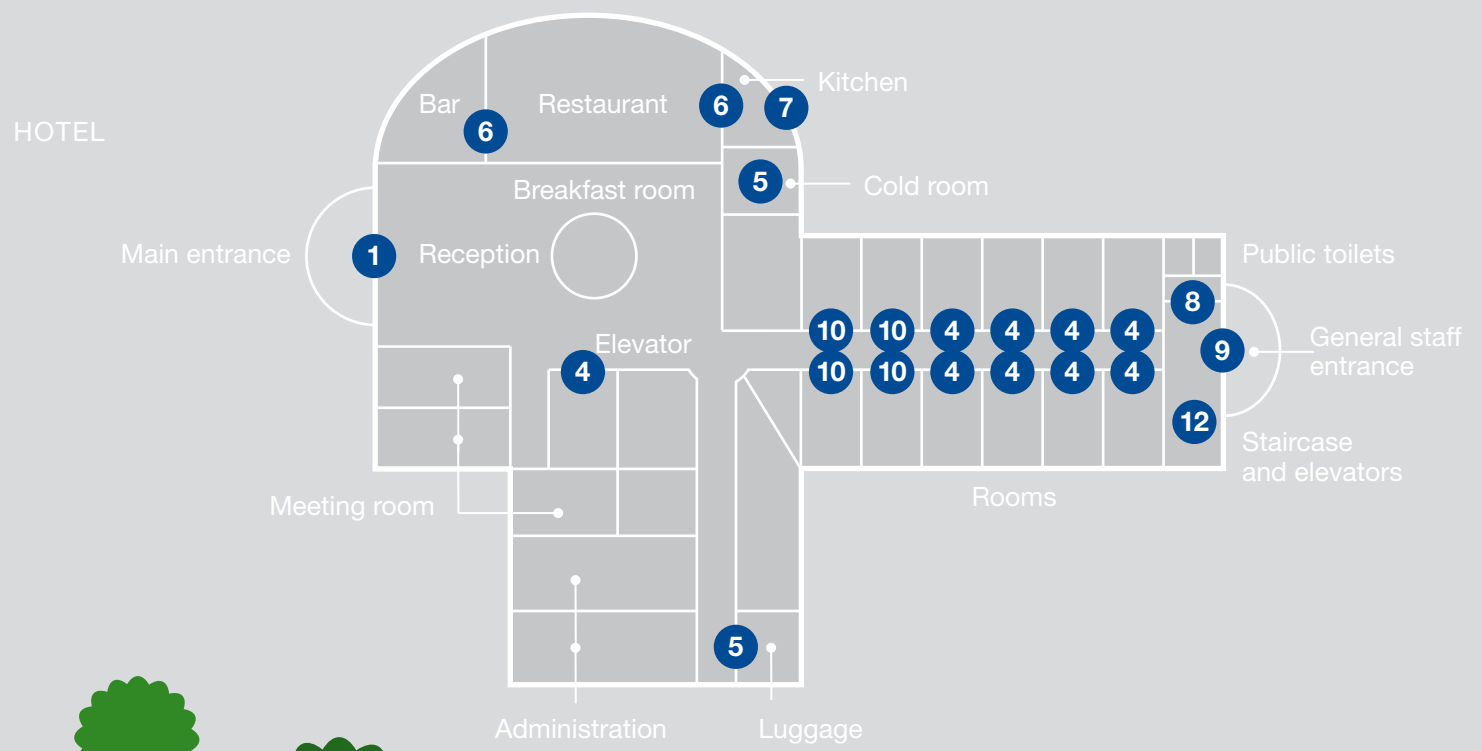

12 Staircase and elevator area – shopping mall and hotel

Very often local building codes require staircases and elevator access areas to be isolated from the rest of a large building due to fire regulations, or simply to reduce draughts in the building as much as possible due to the well-known "chimney effect". By automating the doors to these areas, this effect will be reduced significantly while at the same time improving access. The doors to floors that are restricted from public access can be equipped with an access control system.

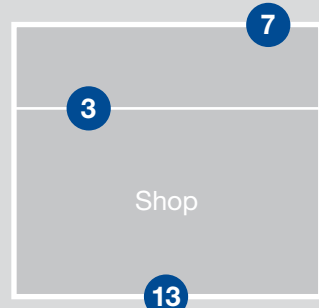

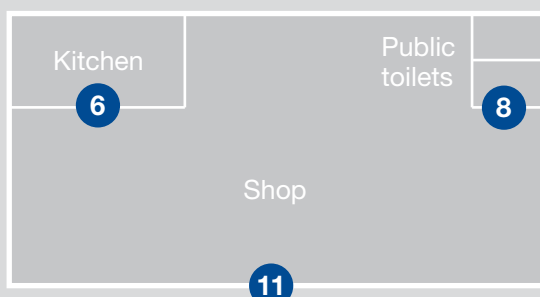

13 From simple entrance to complete vestibule

– retail shop

From a single automatic door to a complete vestibule, a divided entrance and exit can be provided, including all aluminium, glass, etc. Integrated air curtains and steel rollershutters can also be included. This is a real "One-stop-shop solution" which makes planning and installation easier. After sales service on all technical installations can be maintained in one visit. This type of coordinated service requires less travel and labour with one technician maintaining the automatic doors, the air-curtains and the rollershutters.

Groundbreaking service and maintenance

Besam is not only up-to-date with today's industry standards and design. We pride ourselves in providing qualified recommendations for installation and service to help you get the most out of your investment. In every market where we offer our products, we also offer dedicated service solutions.

A single point of contact is all you need to get the benefit of our service covering all of your entrances. We service Besam door systems as well as other brands. With a planned maintenance agreement, we will help to optimise your installation's efficiency and reduce its costs during the lifetime of the product. We also offer specialised customer training and support programmes, as well as technical advice tailored for the retail sector.

Delhaize – Halle, Belgium

Besam will assist you with an optimal plan for your existing automatic door portfolio and help you to budget future investments as accurately as possible. We can also help you with appropriate retrofits suitable for your existing environment or replacement of worn-out components.

For further information please order the Besam Service brochure at www.besam.com.

Global and local

Reliable products, continuous product development, and groundbreaking service and maintenance tailored to fit your needs make Besam the leading supplier of entrance solutions for the retail sector. Our product portfolio contains global products and solutions, but our point of view is always local for every single application.
